## 1. Specifications

**Connectors** - (5) RJ45

**Data Rates** - 10/100/1000 Mbit Ethernet

**Operating Temperature** - 32° to 149°F (0° to +65°C)

**Relative Humidity Tolerance** -

10 to 95% non-condensing

**Size** - 1.75”H x 19”W x 4.75”D

**Weight** - 2 lb.

## 2. Installation & Operation

This switch uses a PC board-based assembly to ensure accurate communications of high speed Ethernet signals between to common port and the selected port.

Locate the switch in a stable environment that is relatively free of vibration and contamination. No external power is required to operate the switch. Ethernet cables that conform to the speed of the data to be passed through the switch should be used for all connections to it. Shielded cables are recommended.

Operate the switch by rotating the control knob that is located on the front of the switch to the port that you wish to connect to the common port.

There are no user-repairable components in this switch. If service or technical support is required, please contact your representative or Market Central, Inc. A RMA# will be issued to you if the switch must be returned for service. If you must return a switch for service, please use the original packaging and include details of the problem
